NeoProcesses

SOFTWARE DEVELOPMENT & DIGITAL SOLUTIONS

OFFICIAL CORPORATE PROFILE

REF: NP-CPB-2026 // A4 PORTRAIT

• SOFTWARE DEVELOPMENT & DIGITAL SOLUTIONS

Custom Software. Built Around Your Business.

High-performance web applications, cross-platform mobile systems, and business management software engineered for real daily operations.

Websites & Mobile Applications

Modern corporate web portals and cross-platform mobile apps engineered for customer conversion and daily field workflows.

Custom Software Development

Bespoke backend architectures, client dashboards, and specialized business logic tailored to your exact operating requirements.

Business Automation

Digital billing terminals, POS systems, inventory management, and automated workflows that eliminate manual paperwork.

✓ Markets We Serve: Pakistan, Saudi Arabia & International Markets

• CORPORATE OVERVIEW & ENGINEERING PHILOSOPHY

Bridging Business Workflows & Dependable Software

Growing commercial enterprises frequently struggle with digital systems that are either overly rigid or poorly matched to everyday operations. Generic packages often impose recurring per-user fees while forcing staff into complex workarounds. **NeoProcesses** develops practical, high-performance web platforms, POS billing terminals, and mobile applications designed to mirror real business practices.

Our Core Engineering Approach

PRACTICAL ARCHITECTURE

We prioritize clarity, speed, and reliability. Every interface element, database structure, and integration is planned to remove operational bottlenecks, improve staff efficiency, and deliver sustainable commercial value.

COMMITMENTS TO EVERY CLIENT

The Seven Value Propositions

CLIENT-CENTRIC PRINCIPLES

01. Clarity Over Complexity

SIMPLICITY

We choose straightforward, dependable solutions tailored to your operational needs rather than introducing unneeded technical overhead.

02. Rigorous Multi-Device Testing

VALIDATION

Every user interface, touch checkout screen, and management dashboard is tested across modern mobile and desktop screen sizes.

03. Security by Architecture

SECURITY

Strict database security rules and role-based access control policies protect confidential business records and prevent unauthorized changes.

04. Direct Engineering Collaboration

DIRECT TOUCH

You collaborate directly with the software engineers building your solution, ensuring clear communication with zero lost context.

05. Commercial Code Handover

OWNERSHIP

Project source code and agreed milestone assets delivered per contract terms, avoiding unnecessary proprietary vendor lock-in.

06. Honest Feasibility & Scoping

INTEGRITY

We conduct transparent feasibility evaluations upfront, providing realistic timelines and itemized deliverables before development starts.

07. Complete Handover, Documentation & Dedicated Support

LIFECYCLE

Every deployment concludes with operational documentation, staff workflow walkthroughs, and direct post-launch assistance to ensure smooth daily adoption.

Direct Technical Communication

Clients engage directly with engineers who architect and implement software, allowing business workflows to translate smoothly into code.

Quality Control & Versioning

Every codebase follows disciplined Git version control, structured styling guidelines, and multi-device preview checks before release.

APPROVED SERVICE OFFERINGS

Six Core Software & Digital Capabilities

We provide focused software development services designed to automate manual tasks, modernize company presentation, and support day-to-day business operations.

01 — WEB PLATFORMS

Website Design & Development

High-performance commercial websites and web platforms.

Modern corporate websites, product presentation portals, and web applications built with clean code and rapid loading speed.

- Custom Next.js commercial websites and business portals
- Interactive digital product catalogues with direct RFQ links
- Responsive layouts for desktop, tablet, and mobile devices

`Next.js` `React` `Semantic CSS` `Vercel`

02 — MOBILE SYSTEMS

Mobile Application Development

Cross-platform iOS and Android mobile applications.

Native-feel mobile apps with camera integration, real-time database sync, and role-based interfaces for field staff and customers.

- Cross-platform mobile applications for iOS & Android
- Multi-role interfaces (Customer, Operator, Manager views)
- On-device camera photo logging and condition inspection

`Flutter` `Dart` `Firebase Auth` `Cloud Firestore`

03 — BESPOKE SYSTEMS

Custom Software Development

Tailored software built around exact operational workflows.

When off-the-shelf software cannot adapt to unique business logic, we architect custom backend pipelines and internal management portals.

- Custom administrative dashboards with granular permissions
- Secure database relationships and cloud API backends
- Role-based access control preventing unauthorized data changes

`Node.js` `REST APIs` `Cloud DB` `RBAC`

04 — OPERATIONS

POS & Billing Systems

Fast billing counters, automated invoices, and daily registers.

Replacing paper slips and spreadsheet errors with reliable checkout terminals, printable receipts, and daily sales visibility.

- Fast Point-of-Sale (POS) counter billing and checkout
- Instant printable receipt generation and digital records
- Urdu/English bilingual options for workshop and counter staff

`React` `POS Logic` `Invoicing` `Thermal Print`

05 — MANAGEMENT

Business Management Systems

Order tracking, inventory management, and operational oversight.

Structured software to manage order lifecycles, stock movements, and staff responsibilities with centralized status tracking.

- Order lifecycle tracking (Intake, In-Progress, Delivered)
- Inventory tracking and low stock alert notifications
- Multi-branch counter coordination and manager views

`Cloud Firestore` `Inventory Logic` `Role Management`

06 — COMMERCE

E-commerce Solutions

Online storefronts, B2B catalogues, and order automation.

Digital commerce platforms enabling companies to showcase product inventories, receive bulk inquiries, and process orders efficiently.

- B2B digital product catalogues with categorized listings
- Direct WhatsApp order dispatch and RFQ request forms
- Downloadable procurement lists and bulk quotation flows

`E-commerce` `B2B Portals` `WhatsApp RFQ`

ADDITIONAL CREATIVE CAPABILITY: GRAPHIC DESIGN & BRANDING

COMPLEMENTARY SERVICE

Brand Identity & Logos
Professional corporate emblems, logo marks, typography standards, and brand design guides.

Social Media Creatives
High-impact promotional posts, campaign creatives, and digital engagement assets.

Marketing Graphics
Digital banner ads, presentation visuals, product infographics, and digital flyers.

Promotional Materials
Print-ready profile binders, commercial catalogues, corporate stationery, and brochures.

FLAGSHIP PROJECT 01 // MOBILE PLATFORM & CLOUD BACKEND

SAYYARAH — Car Rental Marketplace

ANDROID CLOSED TESTING

BUSINESS NEED

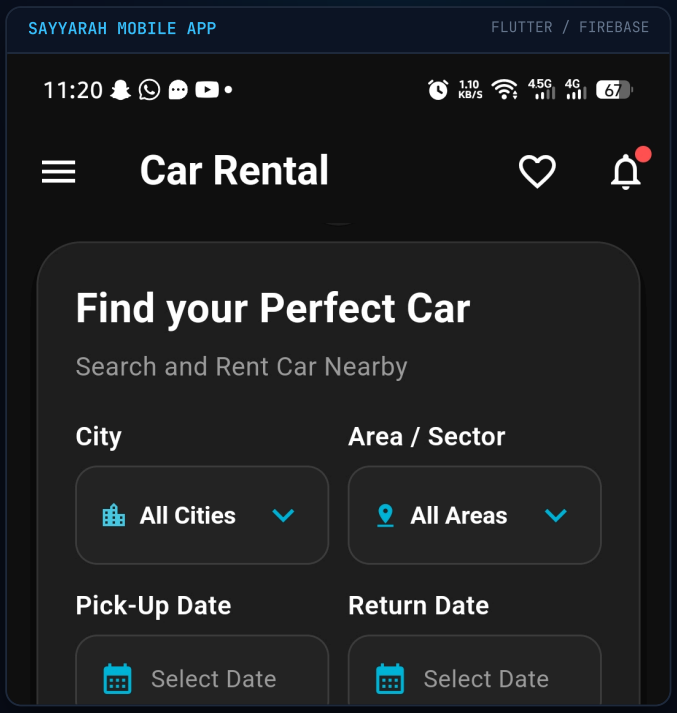

Car rental operations traditionally depended on manual phone calls, paper slips, and unverified vehicle handover agreements. This created recurring vehicle condition disputes, untracked security deposits, and a lack of role accountability between car hosts, customers, and operations managers.

ENGINEERED SOLUTION

Architected a peer-to-peer car rental platform featuring cross-platform Flutter mobile applications for renters and vehicle hosts, connected to a Google Cloud Firestore real-time backend and an operational web admin console. The app is currently undergoing controlled Android closed testing.

VERIFIED SYSTEM TECHNOLOGIES:

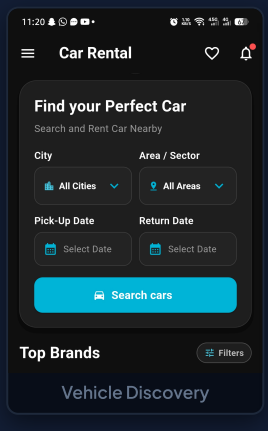

`Flutter` `Dart` `Cloud Firestore` `Firebase Auth` `Cloud Storage` `Next.js Admin`

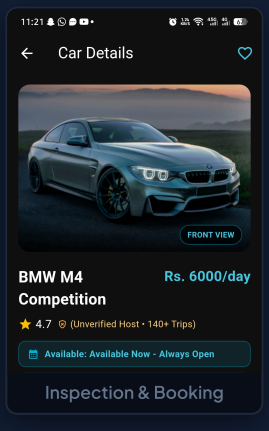

Key Capabilities & Verified Workflows

VERIFIED FEATURES

- **Multi-Role Authentication:** Structured permissions separating Customers, Vehicle Hosts, and Fleet Operations Admins.
- **Photographic Condition Inspection:** Mandatory pre-trip and return vehicle photo logging with cloud storage timestamps.
- **Real-Time Booking Streams:** Instant Firestore snapshot listeners keeping booking stages synchronized across devices.
- **Security-Hardened Rules:** Granular database security rules enforcing role-based data isolation and booking validation.

Vehicle Discovery

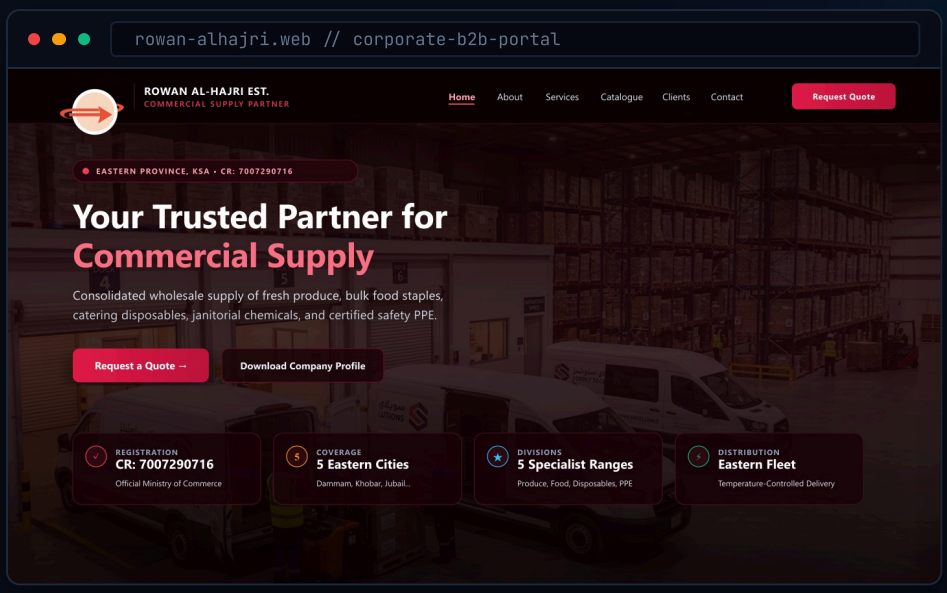

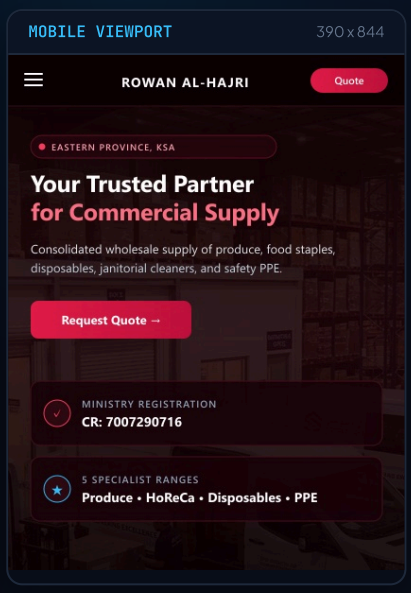

Inspection & Booking

FLAGSHIP PROJECT 02 // CORPORATE B2B WEB & PRODUCT CATALOGUE

Rowan Mohammed Al-Hajri Est.

SAUDI COMMERCIAL B2B PARTNER

Commercial B2B Supply Partner

CR: 7007290716

BUSINESS NEED:

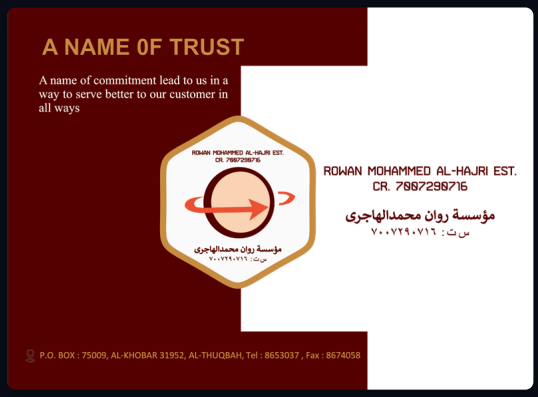

Rowan Mohammed Al-Hajri Est. required a modern digital showcase and structured B2B product catalogue to present wholesale institutional provisions to HoReCa, supermarkets, and industrial catering clients across Saudi Arabia's Eastern Province (Dammam, Al-Khobar, Jubail, Abqaiq, and Al-Hasa).

SOLUTION & KEY CAPABILITIES:

- ✓ **Structured Product Catalogues:** Wholesale listings for Fresh Produce, commercial food disposables, and certified janitorial detergents.
- ✓ **Direct RFQ Procurement Links:** Direct WhatsApp quotation dispatch and downloadable procurement spreadsheets.
- ✓ **High-Performance Implementation:** Fast load times, responsive layout, and bilingual English/Arabic structure.

`HTML5 / Semantic CSS` `JavaScript / Vite` `Three.js` `Saudi B2B`

AUTHENTIC DELIVERABLE — Profile Binder Cover

Official Profile Binder & Brand Identity for Rowan Mohammed Al-Hajri Est. (CR 7007290716, Al-Thuqbah, Al-Khobar)

Fresh Produce
Wholesale HoReCa Fruit & Veg

Packaging & Disposables
Commercial Catering Containers

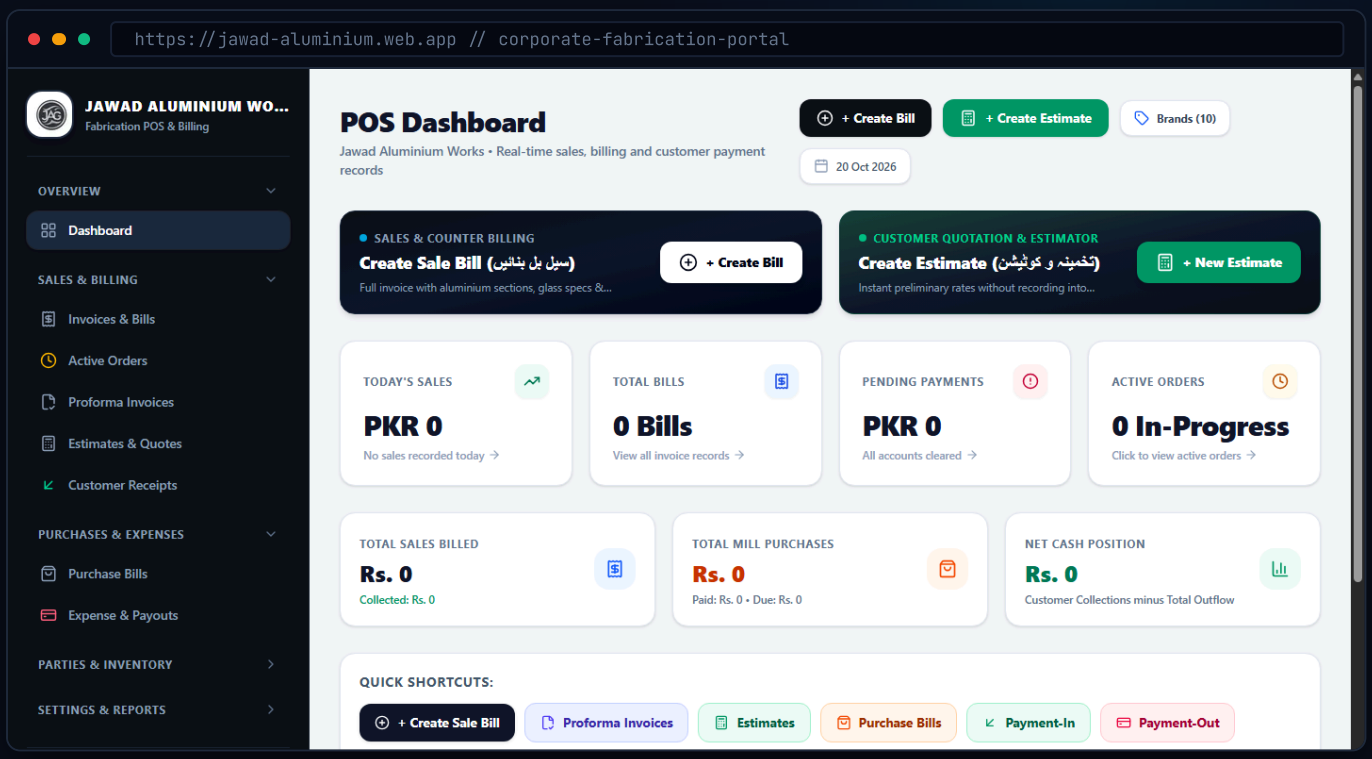

Janitorial & Cleaning
Certified Industrial Detergents

FLAGSHIP PROJECT 03 // ARCHITECTURAL WEB & BUSINESS SOFTWARE

Jawad Aluminium & Glass Works

WEB SHOWCASE & POS DEVELOPMENT

Architectural Fabrication Web & POS

CONTRACT REF: NP-JAW-2026

BUSINESS NEED:

Architectural aluminium and glass fabricators deal with custom dimensions (sq. ft. calculations for structural glazing, curtain walls, sections), where manual paper estimation leads to pricing errors, delayed quotes, and untracked job status.

SOLUTION & KEY CAPABILITIES:

- ✓ **Implemented: Dimension-Calculation Engine:** Square-foot material cost estimation for glass and aluminium sections.
- ✓ **Implemented: Bilingual Workshop POS:** Fast Urdu/English counter interface for estimates and printable bills.
- ✓ **Implemented: Architectural Portfolio:** Corporate web showcase for curtain walls and glazing.
- ⓘ **In Development:** Multi-branch stock tracking and automated supplier purchase ledgers.

`Next.js` `React` `Google Firebase` `Fabrication POS`

Jawad Aluminium & Glass Works
Ghori Town / Koral Town, Islamabad

COMMERCIAL CLIENT PARTNER

Bespoke Dimension Engine

Instant square-foot glass and aluminium section cost computation replacing manual estimation errors.

Bilingual Urdu/English POS

Designed for straightforward usability by workshop counter and billing staff with zero learning curve.

Firebase Realtime Cloud

Automatic offline bill caching with cloud synchronization across workshop sites.

TRANSPARENT ENGAGEMENT MODEL

Six-Step Process & Custom Quotation

We believe that software projects succeed when expectations, milestones, and technical requirements are completely transparent from day one.

STEP 01 — DISCOVERY PHASE

Requirement Discovery

We analyze your daily operations, existing paperwork or slips, user roles, and primary business objectives.

`Output: Scope Baseline Document`

STEP 02 — ARCHITECTURE

Scope Definition & Feasibility

We define an itemized scope baseline, database relationship models, and milestone delivery dates before writing code.

`Output: Architectural Outline`

STEP 03 — UX ENGINEERING

System Architecture & UI Design

We map out clear touch screens, responsive desktop layouts, and role permission flows for client review.

`Output: Interactive UI Prototypes`

STEP 04 — DEVELOPMENT

Agile Implementation & Demos

We write clean, modular code with modern frameworks (Next.js, Flutter). Milestone builds are provided for regular testing.

`Output: Milestone Test Releases`

STEP 05 — QUALITY AUDIT

Multi-Device Testing & Security

We test responsiveness and touch flows across physical mobile and desktop viewports and verify database security rules.

`Output: Quality & Security Sign-Off`

STEP 06 — HANDOVER

Production Launch & Support

We deploy the live application, hand over full project repositories, and conduct staff training with ongoing support.

`Output: Production Launch & Handover`

Our Custom Quotation Approach

TAILORED PROJECT PROPOSALS

We do not publish generic pricing packages because every enterprise operates differently. A custom POS system for a fabricator requires different data schemas than a B2B product catalogue. Instead, we use a transparent 3-step quotation process:

1. REQUIREMENT REVIEW
A focused consultation to evaluate your current setup, feature needs, and technical feasibility.

2. ITEMIZED DELIVERABLES
You receive an itemized proposal with clearly defined scope items, exact timelines, and transparent costs.

3. AGREED MILESTONES
Payments are tied directly to verified milestone deliverables agreed upon before work commences.

Project-Specific Milestones

Payment milestones are mutually agreed per project based on clear, verifiable deliverables and technical complexity.

Demonstrated Progress Sign-Offs

Clients test functioning interim milestone builds on staging environments before approving stage disbursements.

Commercial Code Transfer

Full agreed project source code repositories, assets, and operational documentation handed over upon contract completion.

START YOUR PROJECT

Have a Business Challenge You Want to Digitize?

Whether you need a commercial B2B website, a custom mobile app for field operations, or an internal POS system to replace paperwork, we are ready to discuss your requirements and propose a practical, cost-effective solution.

Three Simple Steps to Get Started

1. Send an Overview
Message us on WhatsApp or email describing your current operational workflow or system requirements.

2. Requirement Review
We discuss scope feasibility, recommend a practical tech stack, and outline delivery stages.

3. Receive Custom Quote
You receive a transparent fixed milestone proposal with exact deliverables and transparent pricing.

Typical Agency Pitfalls Avoided
No recurring retainers without progress, no non-technical sales middlemen, and no proprietary vendor lock-in.

The NeoProcesses Advantage
Direct engineering communication, fixed-price milestone accountability, and commercial code handover.
